Junior Business Analyst

The Graduate Business Analyst will act as the liaison between business users and development teams to ensure that requirements are correctly translated through ubiquitous language. The applicant must possess the techniques to efficiently extract information needed from business users whilst analysing complex problems.

Graduate Business Analysts are responsible for identifying required alterations, assessing the impact and ensuring that any alterations maintain the quality required to make an excellent product.

The Graduate Business Analyst will work with business users to validate their requirements via techniques such as reviews, walkthroughs and personal analysis. In addition, will aid in the testing life cycle through acceptance and in-depth regression testing to prevent the modification of any module or functionality. Furthermore, assisting in the writing of user acceptance test (UAT) cases and will act as a liaison between business users and the relevant bodies during a business's UAT test cycle.

The position is for a Graduate Business Analyst to join the team. This role would be suitable for a recent graduate or already graduated students studied a technology related discipline.

Responsibilities
- Communicating with business users for requirements gathering
- Requirements analysis and documenting of details
- Liaising with the development team to effectively communicate the requirements
- In depth acceptance testing to ensure the quality of the requirement is met
- Assisting the Implementation team and end business users through the entire project life cycle
- Assisting the Support team to analyse software issues
- Recognize new opportunities with existing and new business users
- Product upgrades and installations for internal and client environments
- Regression, acceptance and functional testing

Skills
- Relevant degree – Double Degree in Business (with specialization in Business Analytics) & Computer Engineering/Computer Science
- Experience in capturing and documenting requirements from business users
- Exposure to processes and techniques for requirements analysis
- Experience of supporting a product solution through various stages
- Strong Analytical skills
- Excellent written and communication skills
- Able to understand and explain complex issues in a clear and concise manner
- IT literate
- Experience of Oracle and/or SQL and/or MYSQL databases
- Experience in Agile methodology
- Strong team player but equally motivated to work efficiently independently

Job Location - Singapore

About Company:

Dion is a global financial technology company. We provide a broad range of solutions that meet specific business needs across the financial markets. We draw on our presence across the markets, the depth of our global expertise and the breadth of our product development resources to serve the specific and localised needs of financial institutions.

We work closely with our clients to ensure they have the solutions they need to support their business now and secure it for the future. Whether it is workflow, architecture or hosted solutions, we have a flexible, responsive and collaborative approach that takes the pain out of financial services software. No fuss, no drama: just a commitment to adding maximum business value through technology.

The platform not only provides the automation and efficiencies to support growth and improve profitability, but also the checks and controls to ensure portfolios meet client mandates and demonstrate compliance.
