

Senior Web developer

Description:

Dion requires the skills of a highly talented and experienced web developer to join this established team working on financial products used by the top financial institutions in India.

You are already an experienced web developer and used to the creation of web applications using tools in a greenfield site, potentially starting from scratch if you can persuade us that you have a better way of achieving our goals!

You will come from a strong technical background, be familiar with the latest in web development and able to use these traits to be hands on and lead the development of web applications. You will have a relentless desire to tease out the edge cases in a complex product, and continuously push our service to new levels of customer satisfaction.

You must have the soft skills to collaborate effectively with Product Management, Development, Testing and Operations support teams. You will work within our Agile development teams and will estimate, plan and develop capital market products.

Do you have what it takes to create world class products?

Finally, you will care about influencing your peers to improve software design, development and engineering practices, and advancing development methodologies to build quality into the heart of everything we do.

Job Responsibilities:

- Analyze and understand business requirements and translate them into technical tasks for development
- Create/Extend product technical design for new features
- Code and unit test new features
- Do a level 2 analysis of issues reported by customers and provide fix wherever required.
- Travel to client site for product integration.
- Follow organizations software development processes and contribute to enhance it.
- Manage and lead a small team of junior developers.

Skill Sets:

- Excellent programming skills using ASP .Net, HTML 5, jQuery, AngularJS, Bootstrap, C# and MS SQL Server
- Sound understanding of software development methodologies like waterfall and Agile.
- Experience working in Agile.
- Prior experience in financial services domain, preferably Indian capital market is preferred.
- Excellent analytical ability and communication skills
- Knowledge of software development processes

Experience & Education Qualification:

- Should have minimum 5 years of experience in web application development using Microsoft technologies.
- B.Tech/MCA degree in Computer Science, Engineering or a related subject.
